Admin Interface

> ➢ Admin is the important componant of any kind of website.
> ➢ Admin will manage or maintain the website that means he can add new content, delete the existing content or modify the existing content.
> ➢ As a web-developer, we have to create username and password for the admin so that he can maintain the website by using this username and password.

manage.py@adminpro > createsuperuser

Username : Srinivas
Password   : admin123
Password (again): admin123

Django provides three permissions:

1. active
> ➢ It indicates that the current user is an active member of the website.
> ➢ It is the default permission for every user.
> ➢ If we don't want any user then simply we can make inactive member instead of deleting the user.

2. staff status
> ➢ If any user wants to login the admin site then he must required staff status permission other wise he can   not login the admin site.
> ➢ This user must have active permission.

3. superuser status
> ➢ If any user has this superuser status then he has all permissions like the main superuser.
> ➢ This user must have active and staff status permissions.

Note 1: Any user who has active and supersuer permissions, then he can login to the admin site and can not have any permissions.

Note 2: If the same user has active , staff and super status also then he can login into admin site and he can use all permissions.
