

HTML Marquee Tag

- The <marquee> tag is a container tag of HTML is implemented for creating scrollable text or images within a web page from either left to right or vice versa, or top to bottom or vice versa.
- But this tag has been deprecated in the new version of HTML, i.e., HTML 5.
- The different attributes of <marquee> tag are:

Attribute Description

width	provides the width or breadth of a marquee. For example width="10" or width="20%"
height	provides the height or length of a marquee. For example height="20" or height="30%"
direction	provides the direction or way in which your marquee will allow you to scroll. The value of this attribute can be: left, right, up or down
behavior	provides the scrolling type in a marquee. That scrolling can be like sliding, scrolling or alternate
scrollamount	provides value for speeding the marquee feature
loop	provides how many times the marquee content will loop

Here is the example of how to use <marquee> tag in HTML:

Scroll Up

```
<marquee width="60%" direction="up" height="100px">
```

This is a sample scrolling text that has scrolls in the upper direction.

```
</marquee>
```

Scrolling Amount:

- Marquee speed can be changed using the "scrollamount" attribute. For example, if you are using scrollamount = "1" then it sets the marquee to scroll very slowly, and as you increase the "scrollamount," the scrolling speed will also increase.

For example:

```
<marquee behavior="scroll" direction="up" scrollamount="1">Slow Scrolling</marquee>
```

```
<marquee behavior="scroll" direction="right" scrollamount="12">Little Fast Scrolling</marquee>
```

```
<marquee behavior="scroll" direction="left" scrollamount="20">Fast Scrolling</marquee>
```

```
<marquee behavior="scroll" direction="right" scrollamount="50">Very Fast Scrolling</marquee>
```
