Python Tuple DataType Concepts & Methods Interview Questions

1. What is tuple in Python?

2. How to create and get the length of Python tuples?

3. How do you create a single element tuple in Python?

4. How do you create a multiple elements tuple in Python?

5. How do you access the elements from a tuple in Python?

6. How do you check the length of a tuple in Python?

7. What is use of tuple slicing in Python?

8. How can you concatenate two tuples in Python?

9. What is tuple packing & unpacking? Can you give me some Examples?

10. What are some common tuple methods in Python?

11. How to converting other type objects into tuple type?

12. How to creating empty tuple object in python?

13. Is tuple mutable or immutable type object? Why ?

14. Is tuple allows duplicate values and unique indexing?

15. How do you access individual elements from a tuple object?

16. Can you change the tuple values?

17. How to delete or remove items from Tuples?

18. How to Create and Access a nested tuple?

19. How to access items of tuple in a reverse order?

20. How to check if Items are present/exist in Tuple ?
